CAPITAL GROUP · THE LONG GAME

Live Room

A walkthrough for consultants — how each screen works, and the thinking behind it.

HOW A SESSION FLOWS

Six moments, book-ended by setup and a shared reveal.

1. **Join & allocate**

   Players scan in, pick a nickname, and choose how much starts invested vs. in cash.

2. **Six moments**

   For each: read a real (unnamed) crisis, decide Buy/Hold/Sell on the phone, then the host reveals what the market did.

3. **Checks & a windfall**

   A live leaderboard after moments 2 and 4; a cash bonus lands at moment 3.

4. **The finish**

   Everyone's result, side by side, against simply staying invested.

5. **Explore**

   The same lesson replayed through past crises — 1973 to 2018.

SETUP · THE BIG SCREEN

The host screen

WHAT HAPPENS

The host opens the game on the big screen. It creates a room, a QR code, and one starting amount for the whole room. Players scan to join and their names appear.

THE THINKING

One shared amount means the leaderboard reflects decisions, not who started with more. The QR points at the hosted site, so any phone — on any network — can join.

SETUP · EACH PHONE

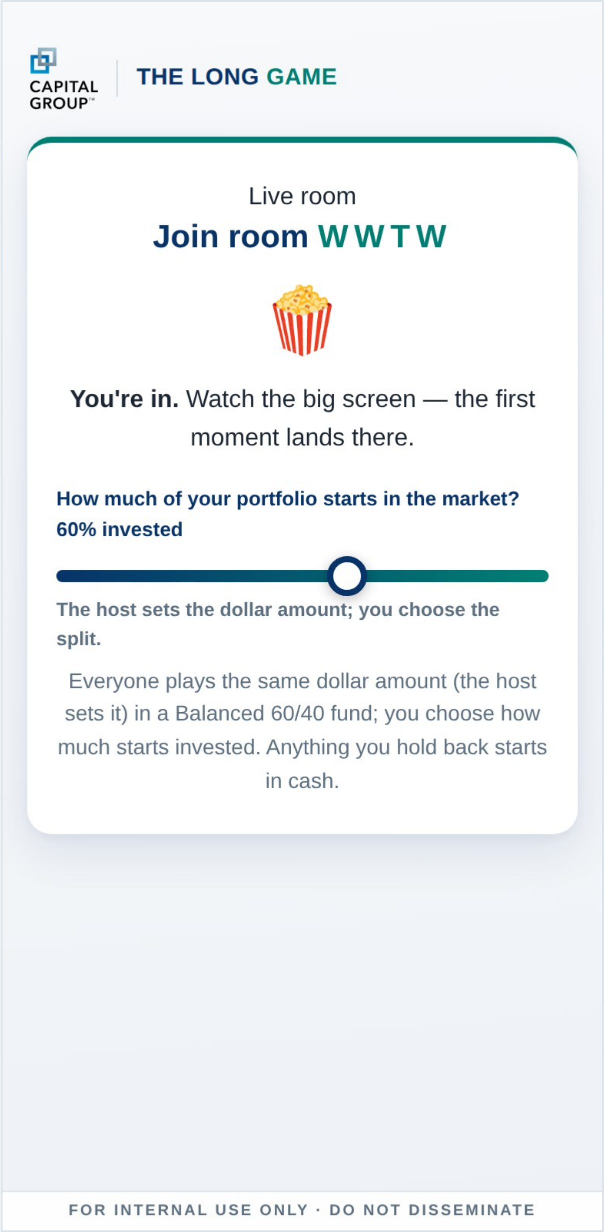
The starting split

WHAT HAPPENS

After joining, each player sets how much of their money starts invested versus held in cash — their own choice, on their own phone.

THE THINKING

Cash feels safe, but the benchmark stays fully invested from day one, so holding back is measured as a real cost later. It turns allocation into a live decision rather than an assumption.



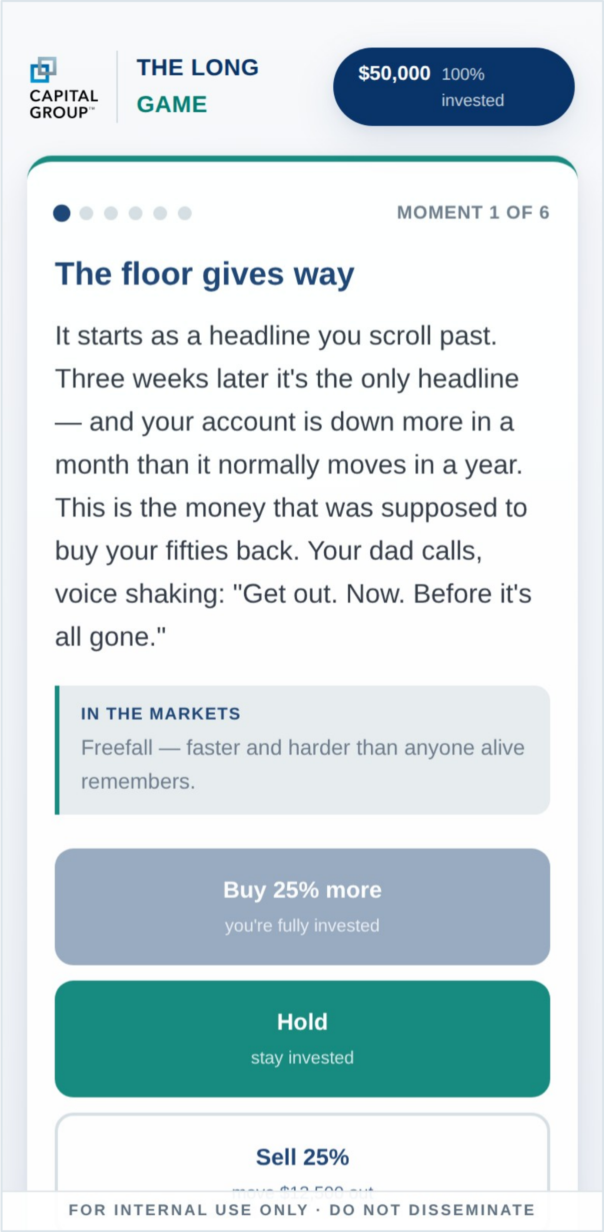
The decision

WHAT HAPPENS

Every moment is a real month of 2020–2025, shown only as a short, tense story — never named or dated. The player chooses Buy, Hold, or Sell.

THE THINKING

Hiding the date forces a gut reaction — the way an investor actually experiences a crisis in the moment, without the comfort of hindsight.



EACH MOMENT · BIG SCREEN

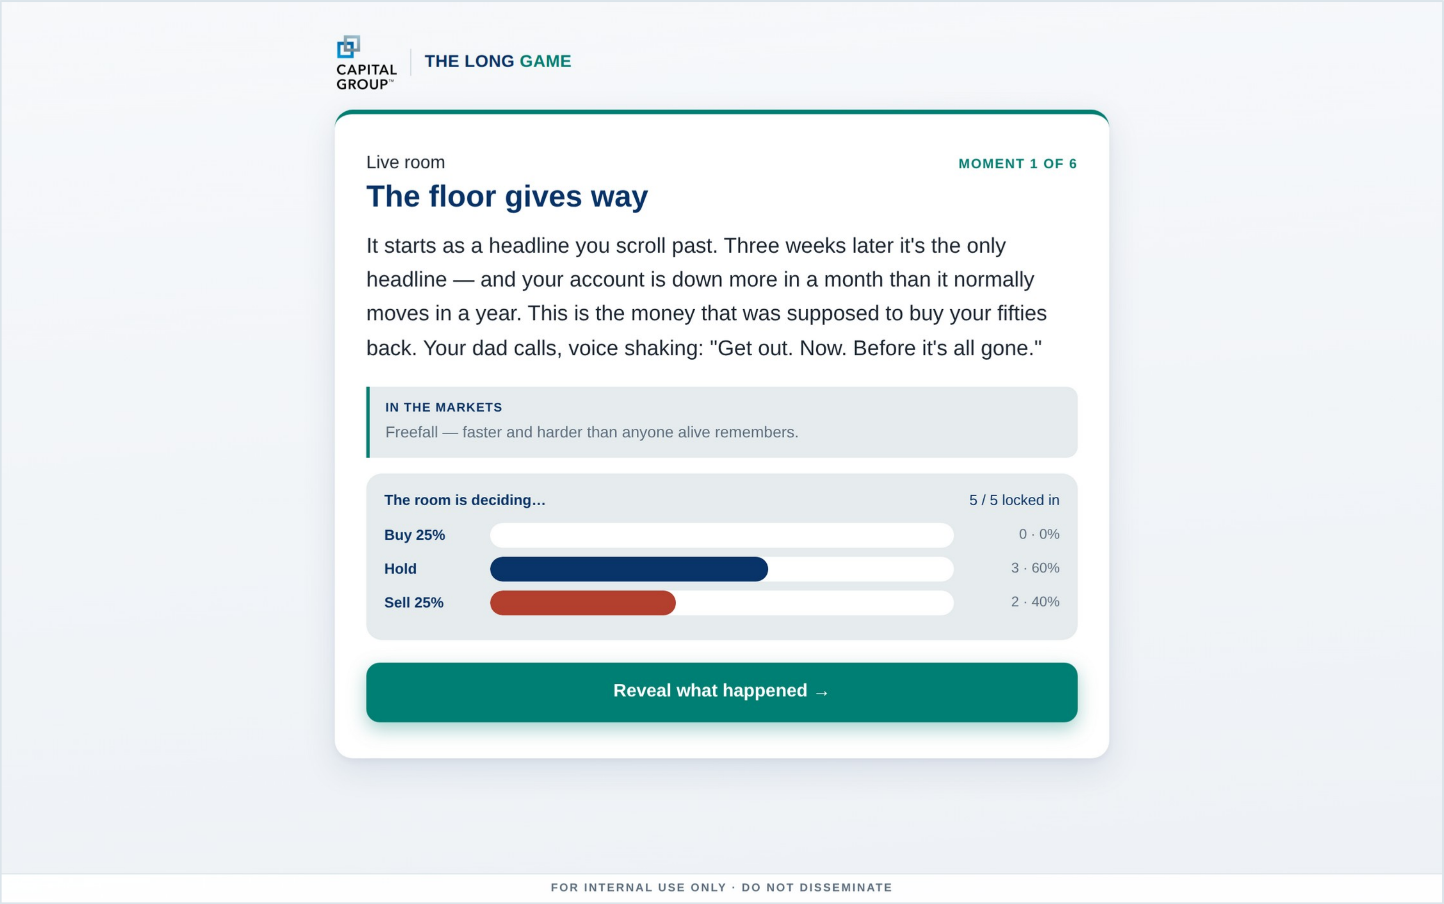
While the room decides

WHAT HAPPENS

The big screen shows the room leaning Buy / Hold / Sell in real time. The outcome stays hidden until the host chooses to reveal it.

THE THINKING

Surfacing the crowd's instinct — and withholding the result — lets the room commit to a decision before they know whether it paid off.



EACH MOMENT · THE REVEAL

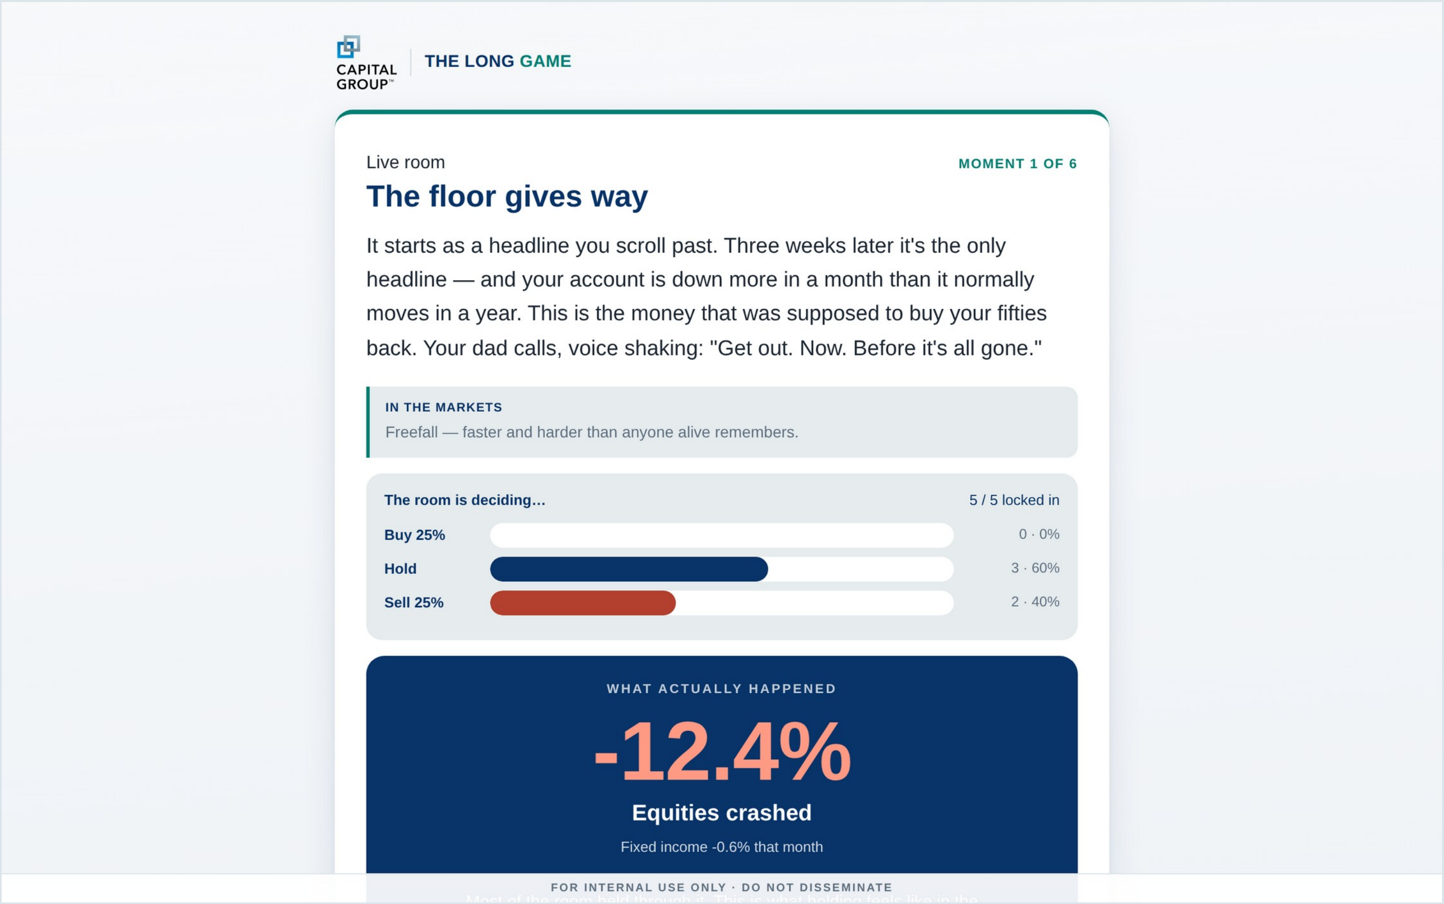
What actually happened

WHAT HAPPENS

On reveal, the big screen shows one number — the market's real move that month — with a plain-language read of what it meant.

THE THINKING

The market's move is separated from the drama of the story, so the takeaway is the data itself, not the fear the headline created.



MOMENT 3 · ITS OWN SCREEN

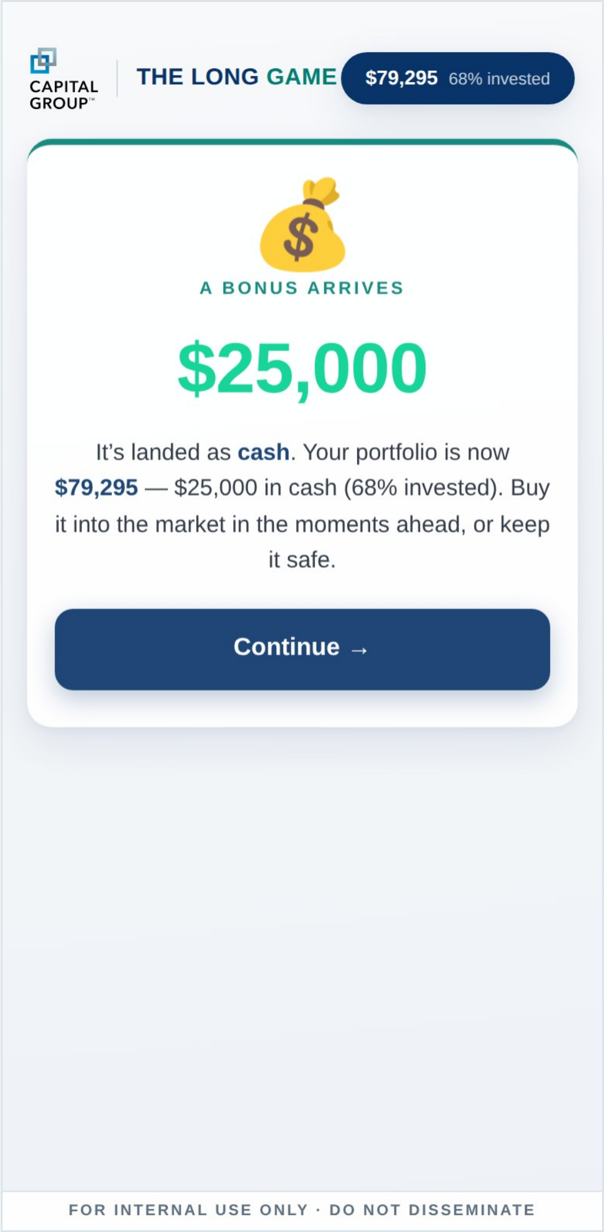
The cash windfall

WHAT HAPPENS

Partway through, a cash bonus lands in every portfolio — as cash, announced on its own screen before the moment continues.

THE THINKING

New money often arrives at unsettling times. Deploying it or leaving it idle is a real decision, and idle cash is measured against putting it to work.



AFTER MOMENTS 2 & 4

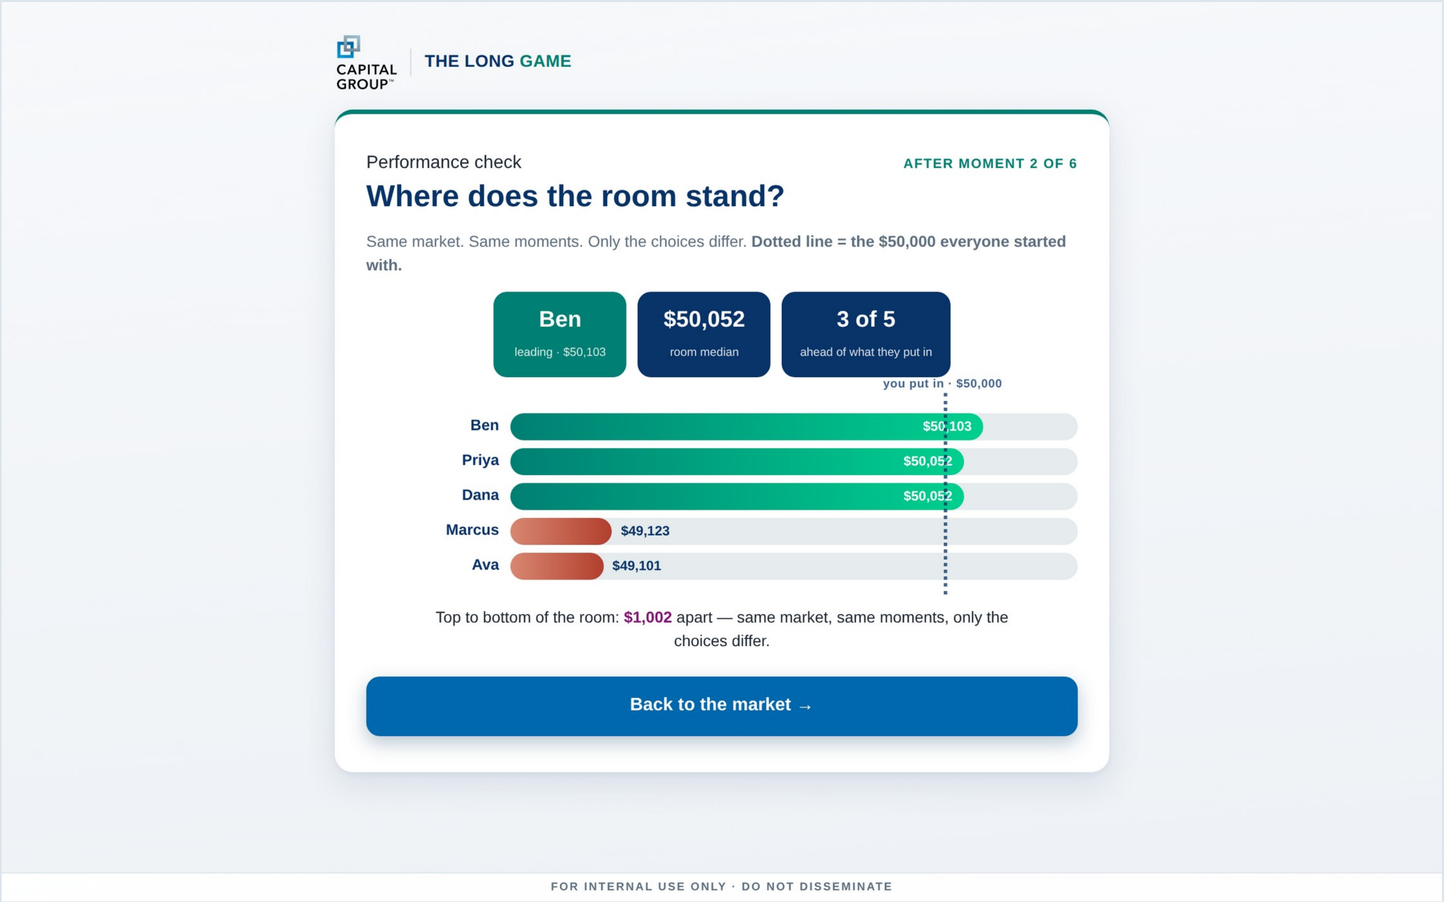
The performance check

WHAT HAPPENS

A live leaderboard shows every player against what they put in. At the same time, each phone shows that player their own rank.

THE THINKING

A mid-game standing keeps the room engaged and makes the final lesson personal — you were in it, and this is where you stood.



The two lines

WHAT HAPPENS

Each player's own chart. Teal “Your choices” is the path your Buy/Hold/Sell timing produced. Navy “Stayed invested” is the whole amount put in on day one and never touched. Markers show where you acted.

THE THINKING

The gap between the two lines is the whole point — what reacting cost, or (rarely) gained, versus simply holding on. The card states it in dollars and percent. (The Sales edition adds a third line: the fund itself.)

THE FINISH · BIG SCREEN

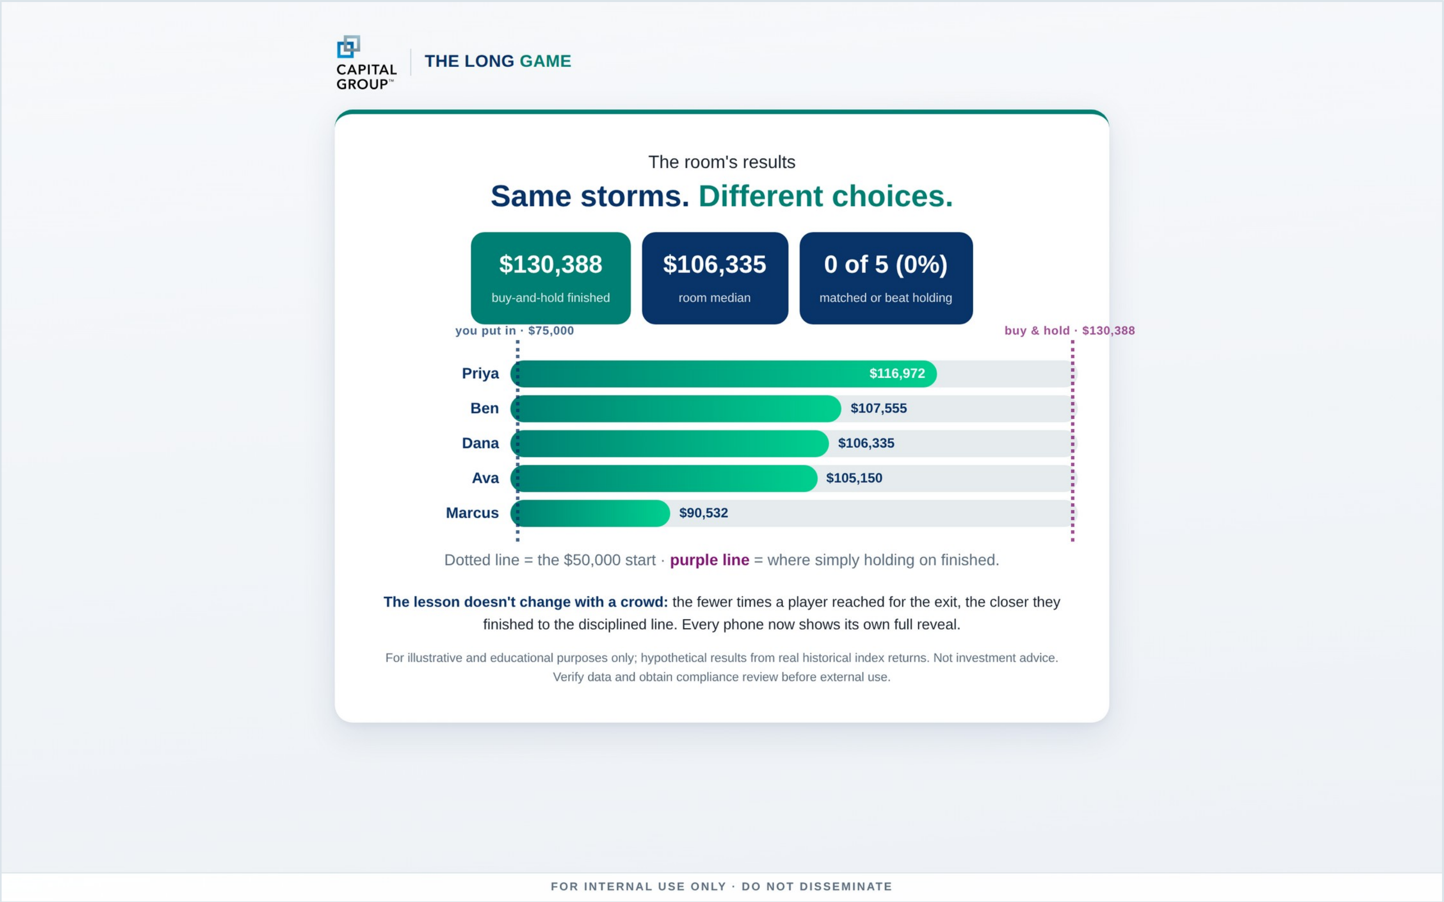
Everyone vs. holding on

WHAT HAPPENS

Every player's final value as a bar, against the line for total money put in and the line for simply staying invested the whole time.

THE THINKING

The room sees one shape together: the fewer times a player stepped out, the closer they finished to the disciplined, stayed-invested line.



AFTER THE GAME

Explore other crises

WHAT HAPPENS

Players can replay the same comparison through earlier crises — 1973, 1987, 2000, 2008 — each showing staying invested versus sitting out the best months.

THE THINKING

It shows the pattern isn't a 2020 fluke. The best days cluster next to the worst, so stepping out to avoid the pain usually means missing the recovery.

Three ideas hold the whole game together.

Emotion, not math

It recreates fear, FOMO and regret so the room feels why investors sell at the wrong time — the real reason returns get missed.

Real data, hidden dates

Real monthly returns make it credible; hiding the dates keeps it honest — every decision is made without hindsight.

Benchmarked to holding

Every choice — timing, cash, the windfall — is measured against simply staying fully invested, so the cost of reacting is explicit.

RUNNING IT

What a consultant actually does.

1

Host from the official link

Open the game on the big screen — it creates the room and QR. Set the starting amount.

2

The audience scans

Any phone, any network. Names appear as they join; press start when the room is in.

3

Pace the six moments

You control reveal and next; the checks, windfall and finish run themselves. 5–50 players, ~15 min.

Internal / pre-approval. Confirm data + compliance sign-off before any client-facing use.
