

CAPITAL GROUP · THE LONG GAME

Live Room

The audience game, walked through in one screen each.

A consultant walkthrough — what players see, and why it works.

Internal use only · Do not disseminate

STEP 1 · SET UP

Scan to play

One QR on the big screen. Any phone joins — any network. You set one starting amount for the whole room, so the leaderboard is fair.

STEP 2 · YOUR STAKE

Invest it — or don't

Each player chooses how much of their money starts in the market. Holding cash on the sidelines feels safe — the game will show what it costs.

 THE LONG GAME

Live room

Join room **WWTW**

You're in. Watch the big screen — the first moment lands there.

How much of your portfolio starts in the market?
60% invested

The host sets the dollar amount; you choose the split.

Everyone plays the same dollar amount (the host sets it) in a Balanced 60/40 fund; you choose how much starts invested. Anything you hold back starts in cash.

FOR INTERNAL USE ONLY · DO NOT DISSEMINATE

Six real crises

Real months of 2020–2025, but never named. Players react on gut — Buy, Hold, or Sell — with no idea which crisis they're in.

CAPITAL GROUP

THE LONG
GAME

\$50,000

100%
invested

MOMENT 1 OF 6

The floor gives way

It starts as a headline you scroll past. Three weeks later it's the only headline — and your account is down more in a month than it normally moves in a year. This is the money that was supposed to buy your fifties back. Your dad calls, voice shaking: "Get out. Now. Before it's all gone."

IN THE MARKETS

Freefall — faster and harder than anyone alive remembers.

Buy 25% more

you're fully invested

Hold

stay invested

Sell 25%

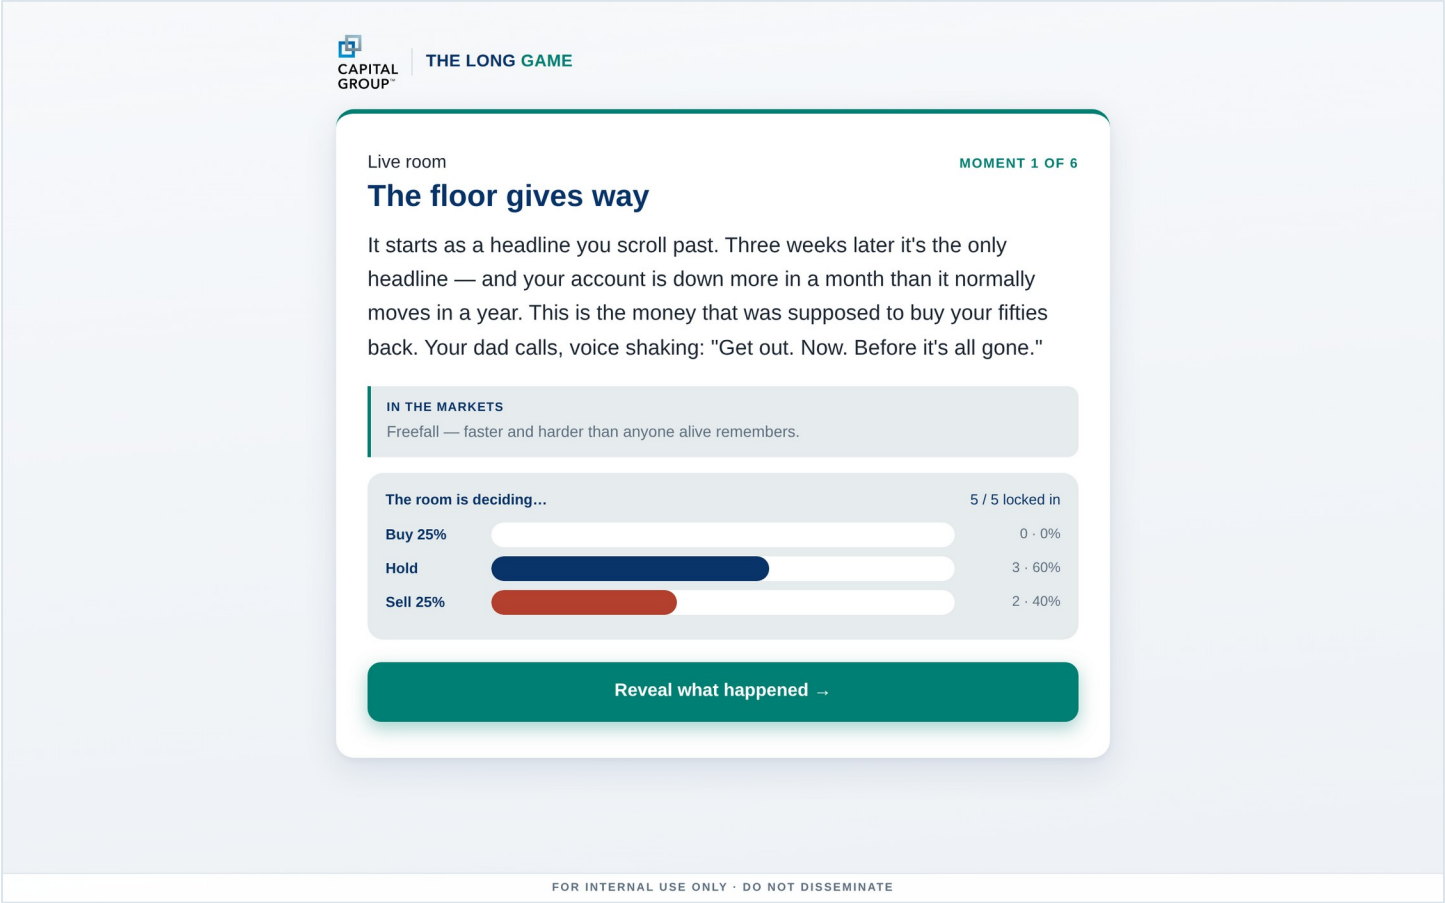

move \$12,500 out

FOR INTERNAL USE ONLY · DO NOT DISSEMINATE

LIVE

The room decides

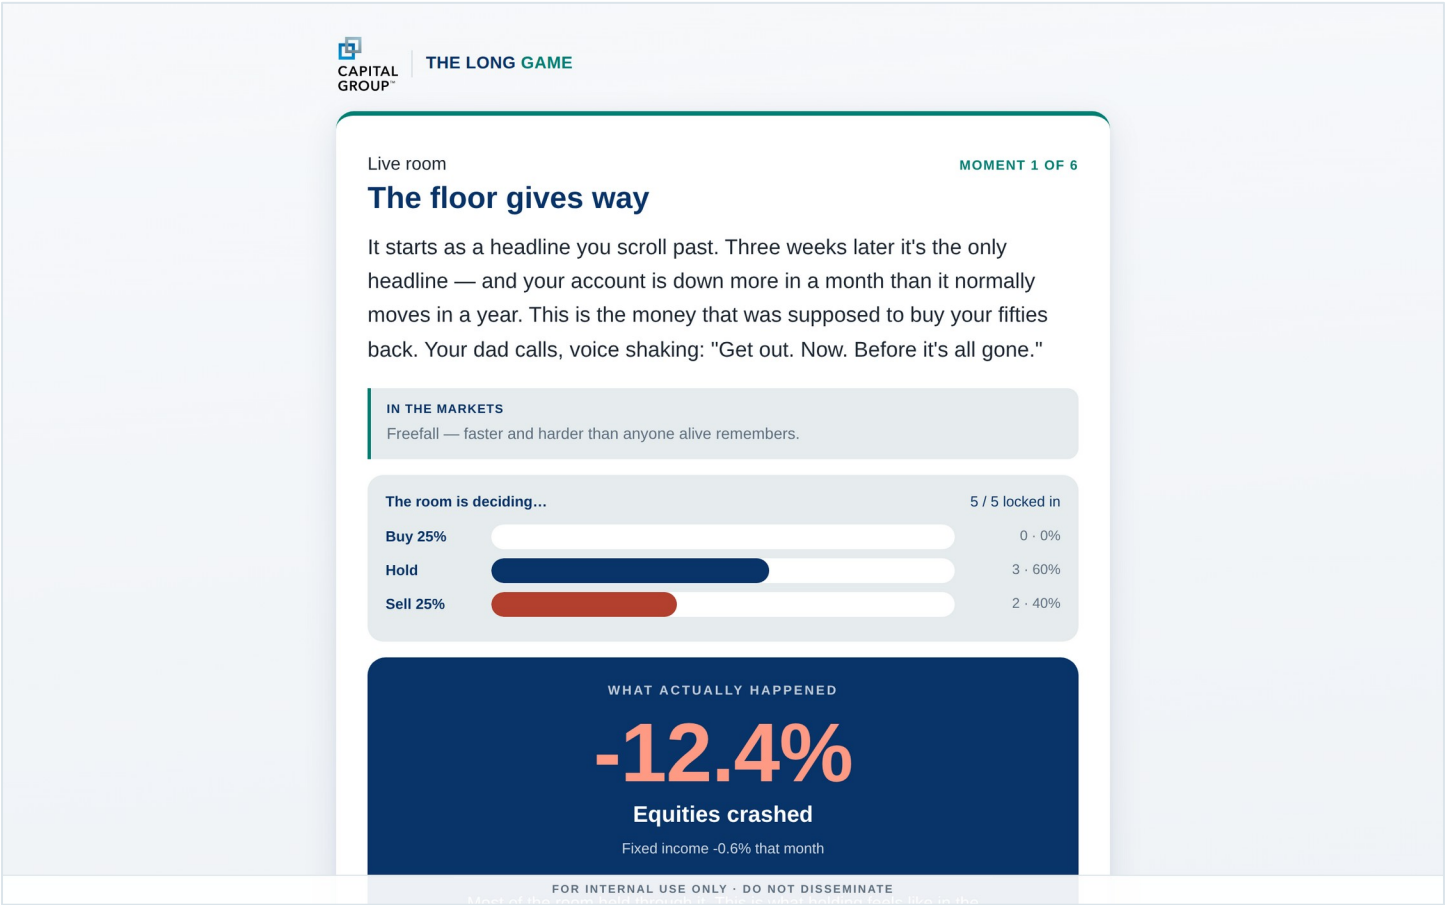

The big screen shows the crowd leaning Buy / Hold / Sell in real time — but the outcome stays hidden until the host reveals it.

THE PAYOFF

What actually happened

One dramatic number: the market's verdict for that month. Did the room's instinct pay off — or not?

THE TWIST

A bonus lands

Mid-game, new cash arrives — often at the scariest moment. Put it to work, or freeze? The same dilemma real investors face with a windfall.

**THE LONG GAME** **\$79,295** 68% invested

A BONUS ARRIVES
\$25,000

It's landed as **cash**. Your portfolio is now **\$79,295** — \$25,000 in cash (68% invested). Buy it into the market in the moments ahead, or keep it safe.

THE HOOK

Who's ahead — live

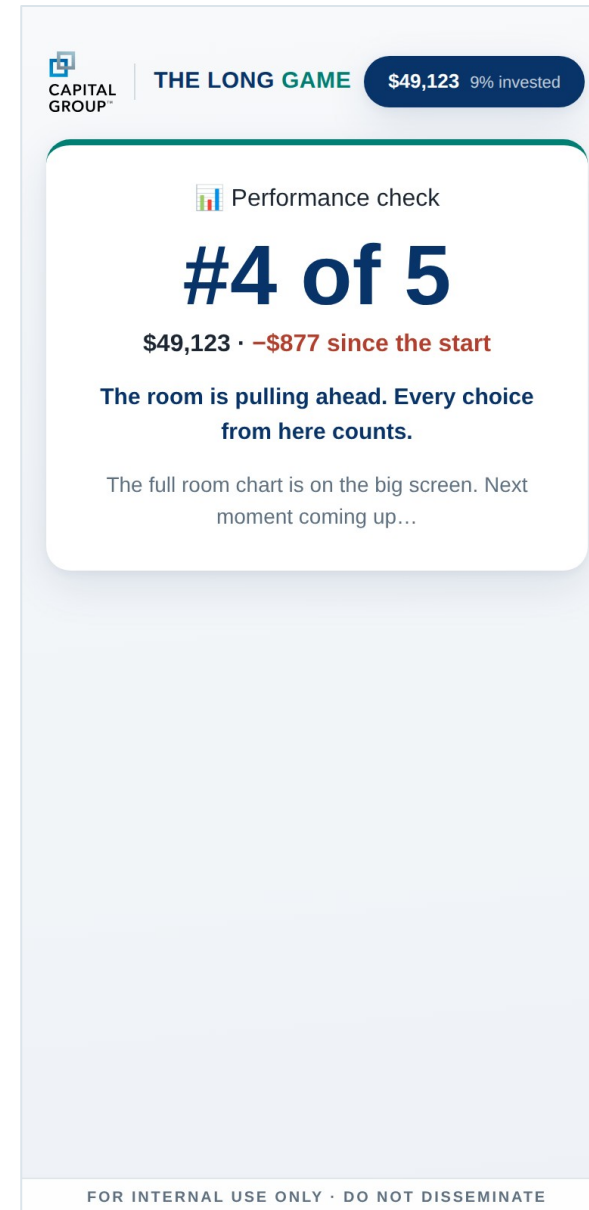

Twice mid-game, a leaderboard shows every player against what they put in. Nothing drives a room like watching the pack pull ahead.

ON EVERY PHONE

Your rank, personally

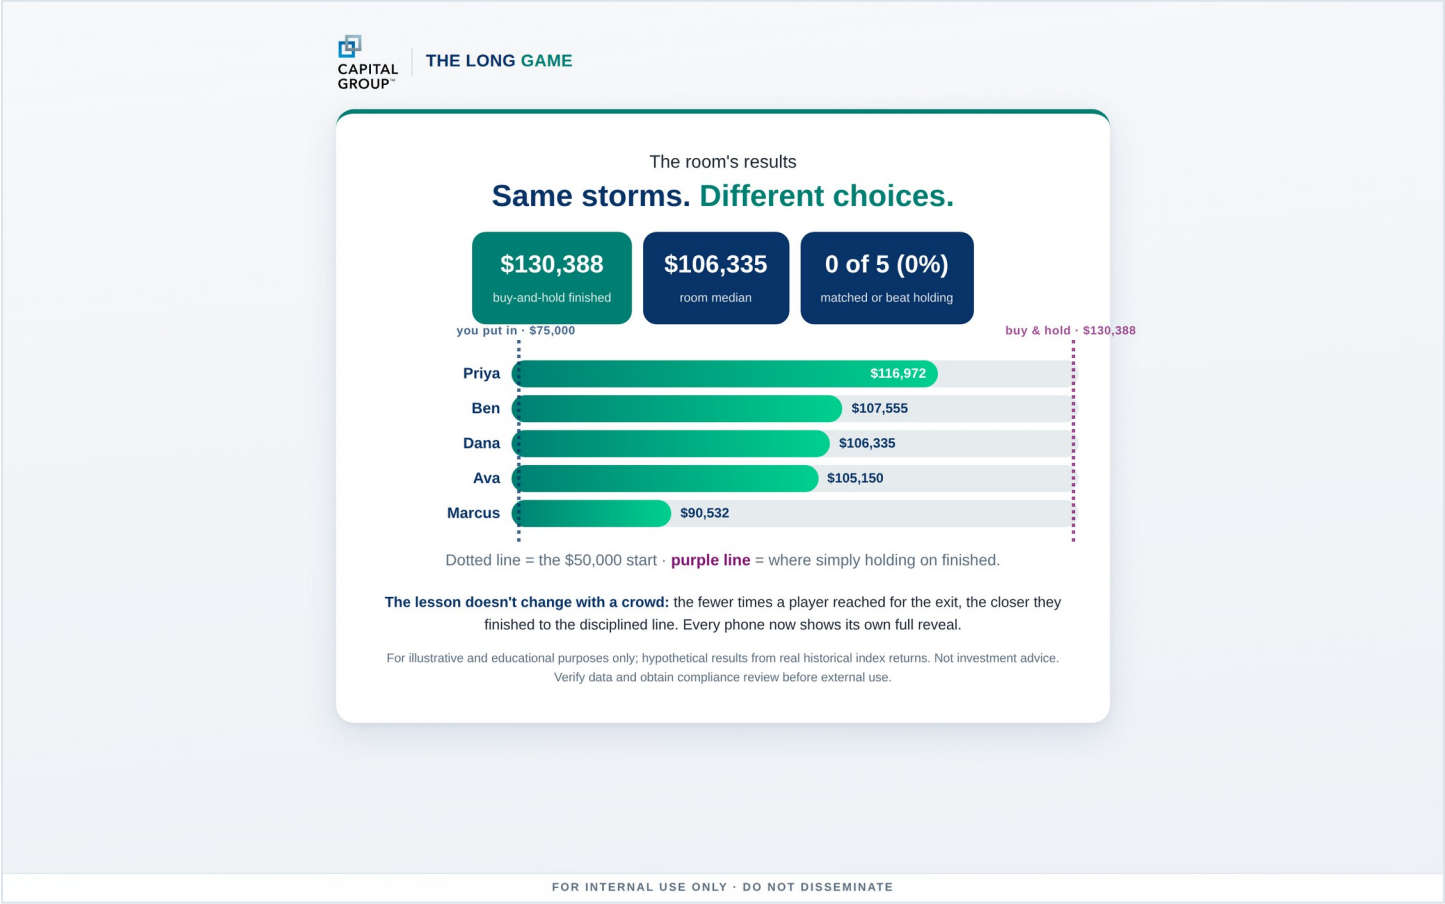

Public chart on the wall; a private '#4 of 12' in your hand. The sting that makes the lesson land.

THE FINISH

Everyone vs. holding on

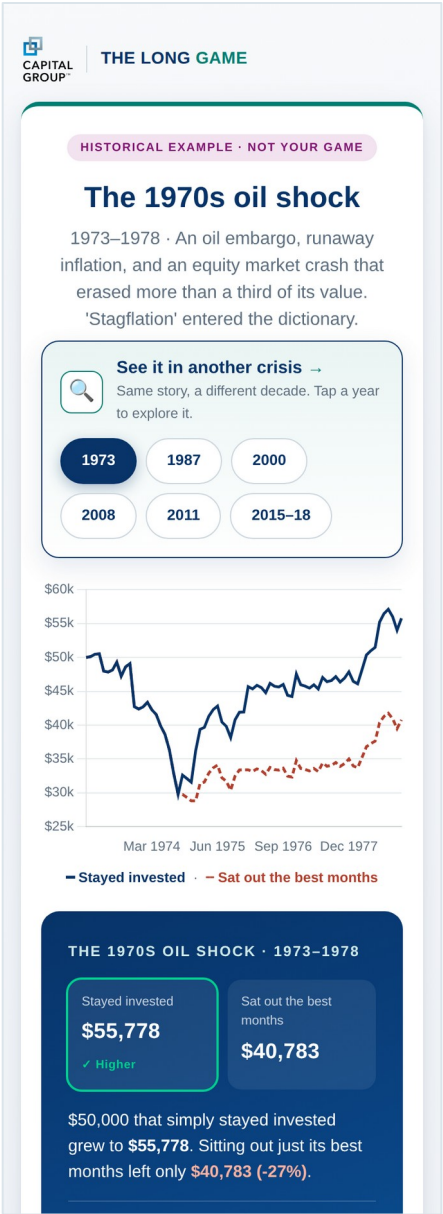

Every player's finish, side by side, against the line that simply stayed invested. The fewer times they jumped, the closer they land to it.

THE PROOF

It repeats in any crisis

1973 · 1987 · 2000 · 2008 — flip through decades and the shape barely changes. Staying invested keeps winning.

Investors don't fail at math. They fail at emotion.

Felt, not lectured

Fear, FOMO and regret are lived in real time — not explained on a slide.

Every instinct says sell

And staying invested still came out ahead. The room feels the pull, then sees the cost.

Opens the conversation

A visceral, shared reason discipline — and a professional in your corner — matters.

Live in about fifteen minutes.

1

Host from the link

Open the game on the big screen — it makes the room + QR.

2

Audience scans

Any phone, any network. Names appear as they join.

3

Play six moments

You pace it; checks and the finish run themselves. 5-50 players.

Reminder: internal / pre-approval. Confirm data + compliance sign-off before any client-facing use.
